FOR FASTEST SERVICE - PLACE OUR FLAT-RATE PRICING (WHERE AVAILABLE) ON YOUR PURCHASE ORDER

Special Information for Jacksonville and Norwich facility services

Facility	Certification Numbers	Product Focus
Jacksonville, FL FSCM: 59501	FAA: UILR299K	Exciters, Leads, Igniters, Sensors, PCCU's, Harnesses
	EASA.145.4976	
	CAAC: F00100116	
Norwich, NY FSCM: 83311	FAA: SMVR502K	Permanent Magnet Alternators, Switches and Sensors
	EASA.145.4977	
	CAAC: F00100149	

Unison's Ignition ExpressSM program offers industry-leading turn times through quality exchange exciters and leads available at two global locations. Harness ExpressSM features a rapid response service for PW2000 and PW4000 Engine Electrical Harnesses. Finally, our Alternator ExpressSM program provides quick turn times and flat-rate pricing for permanent magnet alternators.

PLEASE INSURE YOU INCLUDE A COPY OF YOUR REPAIR ORDER WITH YOUR RETURN

New Ignition Leads for the Price of an Overhaul

Replace worn turbine engine leads now with a new – *not refurbished* – lead for the same standard price as a major lead overhaul. Lead replacement program available for all of our most popular turbine engine ignition leads*.

- Flat rate (same as major overhaul)
- Fast turnaround (most leads ship within 4 business days)
- Simple administration
- New Part Warranty

Note: Offer applies to leads in which the integrity of the conduit has been compromised.

*For details, see www.unisonindustries.com

Service Center Customer Service Representatives

Service Center Customer Service Representatives are available for your assistance. Please refer to pages 5-10 for additional contact information. Repair and overhaul facilities with their corresponding product focus are listed below:

Quality

Unison Service Centers meet or exceed all FAA guidelines and are EASA145, CAAC and ISO9001 approved. Only authentic Unison manufactured parts are used for complete customer satisfaction. Periodic audits by government agencies, engine manufacturers and airline representatives confirm our compliance with applicable regulations. Reference to these certificates may be located at <http://www.unisonindustries.com/ourcompany/certificates.html>.

Staff and Facilities

Unison's unparalleled Service Express programs employ the latest manufacturing techniques, incorporate the latest upgrades and engineering changes, and utilize the most precise overhaul and test equipment in the industry to ensure every piece of equipment exceeds the rigorous quality standards of the customer and Unison. As the Original Equipment Manufacturer (OEM) of the products we repair, Unison is the most qualified source for repair and overhaul service.

Flat-Rate Pricing

To expedite turnaround times, most services on Unison products are performed at flat-rate prices. By placing our published pricing on your purchase orders and not requiring separate price quotations, this is the best way to insure your order will be back to you in the shortest possible time. Any freight charges or international clearing costs are the responsibility of the customer.

Standard Turnaround Times

Exchange – Unison offers replacement units shipped normally within four business days (assuming no price quotation is required) after receipt of your exciter, lead or select harness from our Jacksonville, Florida facility.

"Same Serial Number Overhaul" - The return of your same serial-numbered unit is based on a 20-calendar-day turn time which begins the day your unit is received at our facility (assuming no price quotation is required). Due to additional environmental screening requirements, certain units have turn times greater than 20 days. Our PW4000 N1 Speed Probe typically has a TAT of up to 45 days if certain proprietary repair processes are accomplished. Please consult one of our Service Center Service Representatives for additional information.

Returned Hardware Condition:

Flat-rate pricing is applicable for units in "as removed" condition. As part of our overhaul service, critical parts are thoroughly checked against new standards to ensure the highest degree of reliability. Unison reserves the right to charge an additional fee for units which cannot be rebuilt, or exciter/alternator housings determined unsalvageable. If the unit is extensively damaged, the unit may be considered beyond economical repair (BER). Warranties for permanent magnet alternators and switches/sensors only cover the workmanship and materials used in the last service visit to Unison. Units not listed in this catalog are serviced on a time and material basis. Please contact a Service Center Customer Service Representative for additional information.

Findings Reports:

Unison provides a "Component Condition Report" with each unit shipped. We cannot provide these reports "up-front" in the repair process - but these reports are automatically provided to our customers with the shipped unit.

Repair:

Repair is a common practice of many "third party" overhaul facilities where only the parts necessary to make a unit serviceable are checked and replaced. Repair is not a standard practice at Unison Industries.

Exciter Overhaul:

A Unison overhaul includes a 100% replacement of the life-limited components such as the spark gap and tank capacitor (as applicable to the specific exciter design) which are part of Unison's Exciter Overhaul kit contents. Other parts are replaced upon condition. Each Unison exciter is 100% tested for a proper "hermetic seal" of the housing assembly.

Upgrade/Conversion:

Unison offers upgrade and conversion programs to improve reliability and reduce delays and cancellations.

Recertification (Test & Inspect):

This procedure is used in cases where a unit is tested as received and found to pass performance checks as specified in the appropriate Maintenance Manual. A recertified unit can be returned to service without disassembly. Because individual internal parts are not tested, as is the case in a normal overhaul, this procedure is not recommended for units that have been in service for long periods of time. Unison does not offer a recertification service for ignition leads due to the relatively low expense of rewiring a lead for maximum reliability.

Harness Express

Unison's Harness Express program provides repair, overhaul, and exchange services for various manufactured Unison harnesses used on a variety of engine and airframe platforms. Of particular note, we offer services on engine harnesses for Pratt & Whitney PW2000 and PW4000 engine applications used on Boeing, Airbus, and McDonnell Douglas aircraft. The program offers competitive pricing, selective service bulletin compliance for airline fleet standardization, a 20-day turn-time for repair and overhaul, and a rapid-response exchange program for select PW2000 and PW4000 harnesses - offering FACTORY NEW harnesses at overhaul prices. Over 100 different part number harnesses for Pratt & Whitney engines form the core offering for the program.

Harness Express employs the latest manufacturing techniques, incorporates the latest upgrades and engineering changes, and utilizes the most precise overhaul and test equipment in the industry to ensure every harness exceeds the rigorous quality standards of the customer and Unison Industries. Since the level of needed repair can vary greatly between returns, some repairs are quoted on a time and materials basis. However, for certain programs, Unison has developed flat-rate repair prices to help reduce administrative time. Contact one of our Jacksonville based Customer Service Representatives for more details.

Warranty Information***Harness Warranty***

Overhaul = 1 year from installation date – full harness coverage

Repair = 1 year from installation date – area of repair only

Exciters/Sensors/PCCU's Warranty

Overhaul = 2 years from date of shipment

Leads Warranty

Overhaul (rewire & conduit) = 1 year from date of shipment

Overhaul (rewire only) = 1 year from date of shipment

Rotors/Stators Warranty

Overhaul = 2 years from date of shipment (with notes below)

(1) Stator windings are not replaceable and are NOT warranted beyond standard new part warranty

(2) Warranties for permanent magnet alternators only cover the workmanship and materials used in the last service visit to Unison

Prices Contained in this Catalog

This price catalog supercedes all previous price schedules. Any unit received after January 1, 2010 will reflect the prices contained herein. Prices are subject to change at Unison's discretion.

Terms and Conditions:

All orders will be in accordance with Unison's General Terms and Conditions contained within this catalog unless otherwise agreed in writing.

Special Warranty Information:

Stator windings that are not replaceable are not warranted beyond new part warranty.

Warranties for permanent magnet alternators only cover the workmanship and materials used in the last service visit to Unison. Units not listed in this catalog are serviced on a time and material basis.

Workscope Definitions:

Rotor Overhaul: This is the sole workscope Unison offers for this component. Release tag will indicate "overhaul" since unit is cleaned, inspected and electrically tested and is the lowest level of maintenance possible as rotors cannot be disassembled.

Stator Minor Overhaul: This workscope will apply when our testing confirms the stator passes exterior visual inspection and electrical testing.

Stator Major Overhaul: In addition to what was described in a "minor overhaul", our published flat-rate "major overhaul" price

Over and Above Charges: Customers will separately be quoted if additional material is required over the major overhaul charge -

Note that Unison does not offer a simple "Test and Inspect" service for stators - see "Minor Overhaul"

Special Information for Dayton facility services

Facility	Certification Numbers	Product Focus
Dayton, OH	FAA: GH5R883M	Aerospace Tubing and Ducting
FSCM: 96941	EASA.145.4413	
	CAAC: F00100398	

Incoming Part Number:

OEM part number for the non-compliant/non-serviceable part being sent to Dayton for repair and/or modification.

Outgoing Part Number:

OEM part number for the serviceable part being returned from Dayton to the customer.

Description:

Functional description of the part.

Application:

The OEM model to which the part number is applicable.

Service Bulletin:

The OEM approved Service Bulletin number or repair scheme.

Custom Solution:

Dayton is capable of providing FAR 25 & FAR 33 FAA Designated Engineering Representative (DER) repair solutions to assist FAR 121 and other airline operators in the development of custom solutions for your tubing and associated hardware repair/alteration needs.

MOD:

The pricing, in U.S. Dollars (\$), inclusive of labor and material, to perform a modification and achieve a serviceable condition, exclusive of additional repairs.

- "Q" indicates price will be quoted upon receipt and inspection of incoming part.
- "C" indicates customer should contact Dayton Customer Support for special program and/or warranty pricing.

MOD and/or REPAIR:

The pricing, in U.S. Dollars (\$), inclusive of labor and material, to perform a modification inclusive of additional repairs or a standard repair to achieve a serviceable condition.

- "Q" indicates price will be quoted upon receipt and inspection of incoming part.
- "C" indicates customer should contact Dayton Customer Support for special program and/or warranty pricing.

TAT (Turn Around Time):

- TAT in this catalog reflects the number of calendar days from dock receipt of hardware by Dayton to the dock shipment of hardware from Dayton.
- Published TAT's are based on current product demand and rotatable exchange program participation. Scheduling to accommodate high volume influxes of common parts and/or worksopes may necessitate TAT adjustments on a case-by-case basis.
- TAT's for Non-exchange (non-rotatable) hardware are not guaranteed as published.

Expedite Priorities:

It is anticipated that the customer will order according to the published TAT's. However, to meet customer's emergency needs, special contact numbers are available as shown herein. In these situations, Dayton will advise of action taken within two (2) business days.

Price:

Prices indicated are net unit prices, unless otherwise indicated and are subject to change.

Exchange Hardware:

Part returned to the customer after maintenance may have been originally received from another customer, who is willing to accept repaired parts from a "pool" of other customer owned hardware. The customer must include the statement "Exchange" (or similar) on their purchase order accompanying the hardware.

Non-Exchange Hardware:

Part returned to the customer after maintenance is the same part originally submitted to Dayton for repair from that customer. The customer must include the statement "Non-Exchange" (or similar) on their purchase order accompanying the hardware.

Engine Configuration System Management (ECSM)

Configuration hardware management and repair logistics is made simple through Unison's Engine Configuration System Management (ECSM). ECSM uses shadow boxes to ensure that configuration tube/duct and harness hardware is organized in the correct order of assembly. Custom configurations with tubes/ducts and harnesses are also available. With no metal-to-metal contact, great configuration flexibility, and reduced cycle time, ECSM is a great way to minimize removal and installation damage and reduce costs, eliminate shortages, improve scheduling, reduce inventory and manage and implement service bulletins. If interested, please contact your Unison Account Manager for more details.

Payment Terms:

Payment terms are net 30 days after invoice issuance.

Return of Discrepant Parts:

Parts that are received in a discrepant condition may be returned to Dayton provided the condition was not created during transit. For parts damaged in transit, the customer should file a claim with the appointed Insurance Broker. Parts that are discrepant as a result of the original manufacturing process should be coordinated with your Customer Support Representative for return to Dayton. The discrepant hardware will be processed through Dayton's Material Discrepancy Review (MDR) system. Please reference (MDR) on all return documentation of discrepant hardware and list the damage as specifically as possible.

INCO Terms:

Shipments are EX WORKS, Dayton Plant 3, Dayton Component Repair Division, 2070 Heller Dr, Alpha, Ohio 45301, USA, and are shipped on a freight collect basis. It is therefore necessary for shipments outside the United States that customers specify the domestic shipping address for their freight forwarder who will be acting on the customer's behalf as their Exporter of Record.

Catalog Effective Date:

Pricing and TAT in this catalog is effective January 1, 2010 and supersedes all previous price lists published by Unison Industries LLC.

Non-Listed Parts:

Parts not identified in this catalog may be sent to Dayton for repair development.

Terms and Conditions:

All orders will be in accordance with Unison's General Terms and Conditions contained within this catalog. Other conditions of sale, such as minimum purchase order and lead time, are stated within the respective sections of this catalog.
